Octet QMC

Phase Transitions

Mixed Phase

Hybrid EoS

Hybrid Stars

Conclusions

It is important for a model to be able to reproduce known results.

Some empirical data are known for finite nuclei. We aim for our model to be able to reproduce these. The measurements of interest are:

	$K$	$M_{\text{sat}}^*$
Empirical:	200 – 300 MeV	563 MeV
QHD Theory:	525 MeV	523 MeV
QMC Theory:	280 MeV	735 MeV

The coupling constants used are found via a fit to (experimental) saturation properties of finite nuclei.
